

Team Automation - Case Study

Scalable Cloud Architecture & Disaster Recovery Planning

Challenge

Growing operations required scalable cloud infrastructure.
No documented disaster recovery or business continuity plan.
Deployment processes were manual and error-prone.
Limited operational documentation for the technical team.

Solution

Designed scalable cloud architecture for multi-tier applications.
Implemented comprehensive disaster recovery planning.
Engineered deployment automation blueprints and workflows.
Delivered complete infrastructure documentation.

Results

Scalable Architecture - Ready for 10x growth.
DR Strategy - Recovery time objective: under 4 hours.
Automation - Deployment time reduced by 75%.
Documentation - Complete operational playbooks in place.

Testimonial

Lex Corp's infrastructure expertise was instrumental in scaling our operations. From architecture design to implementation, they delivered a robust, well-documented solution that's been rock-solid in production.
